

$$y = \sin(\theta)$$

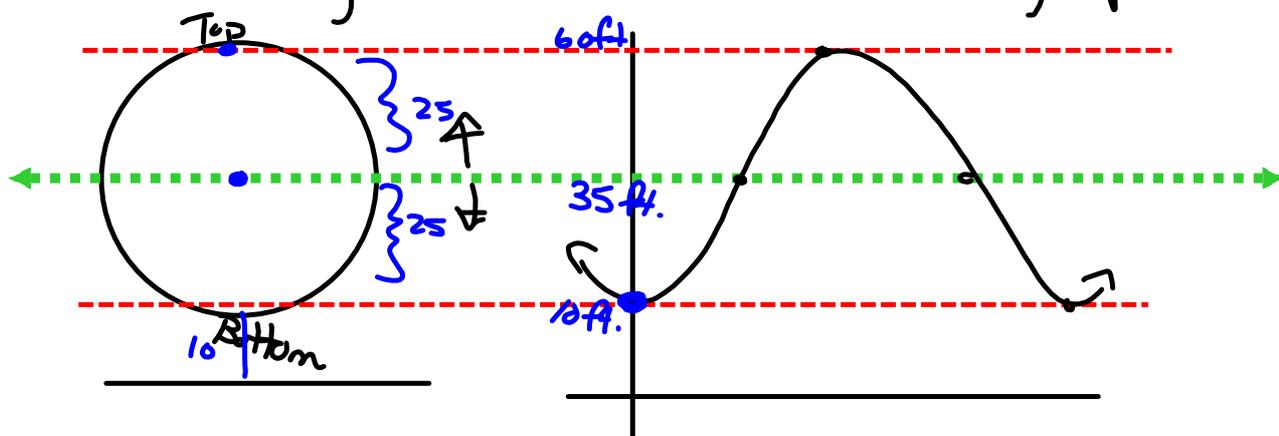

A ferris wheel has a max height of 60 ft. You get on at the bottom 10 ft off the ground. Find the

$$\frac{60 - 10}{50}$$

midline, top amp, bottom amp, and

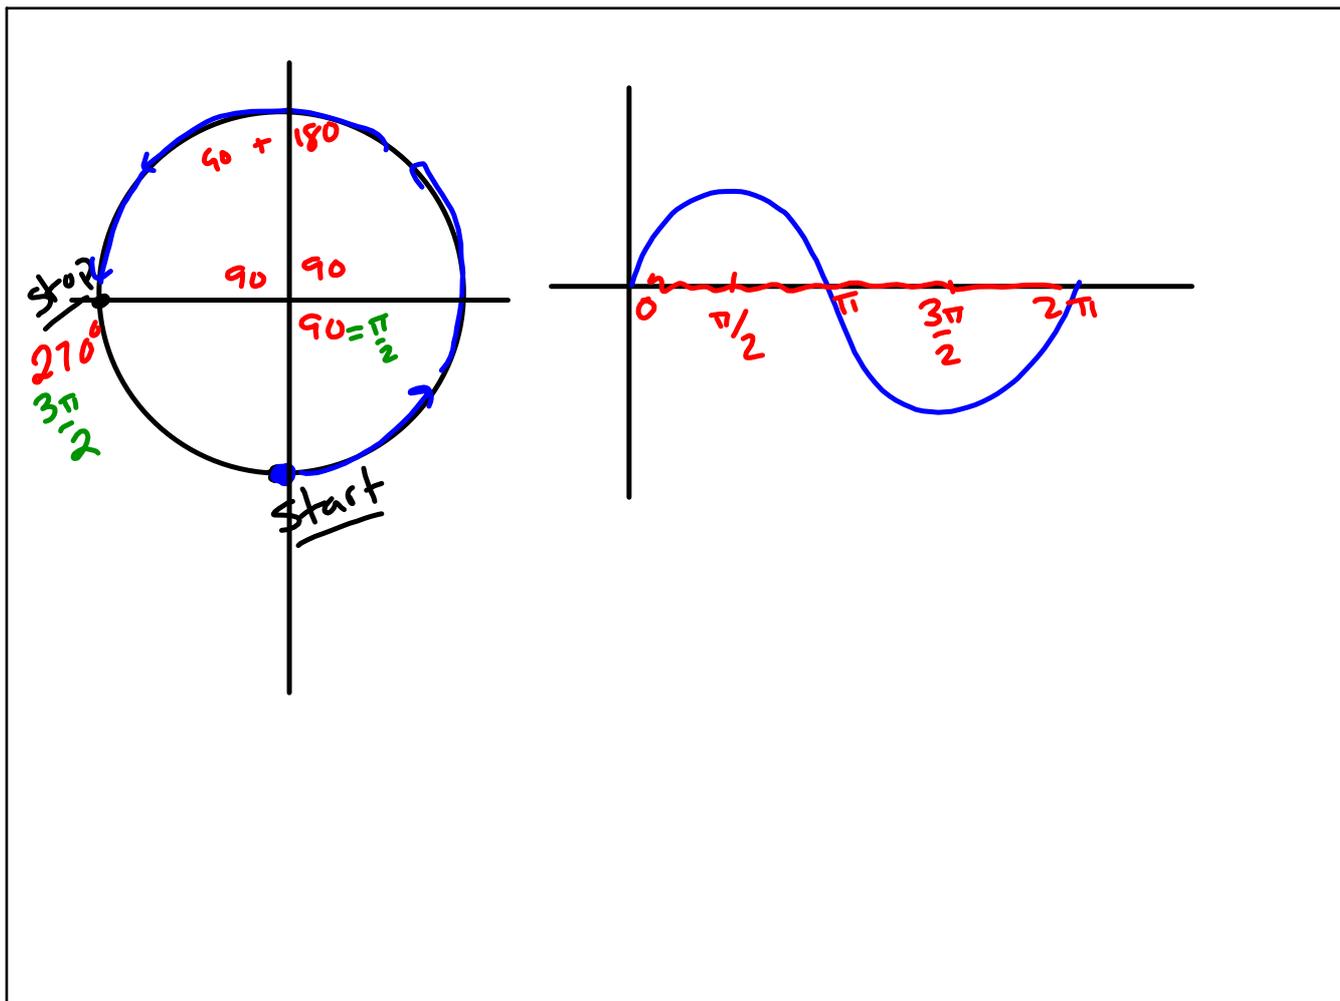

$$\frac{50}{2} = 25$$

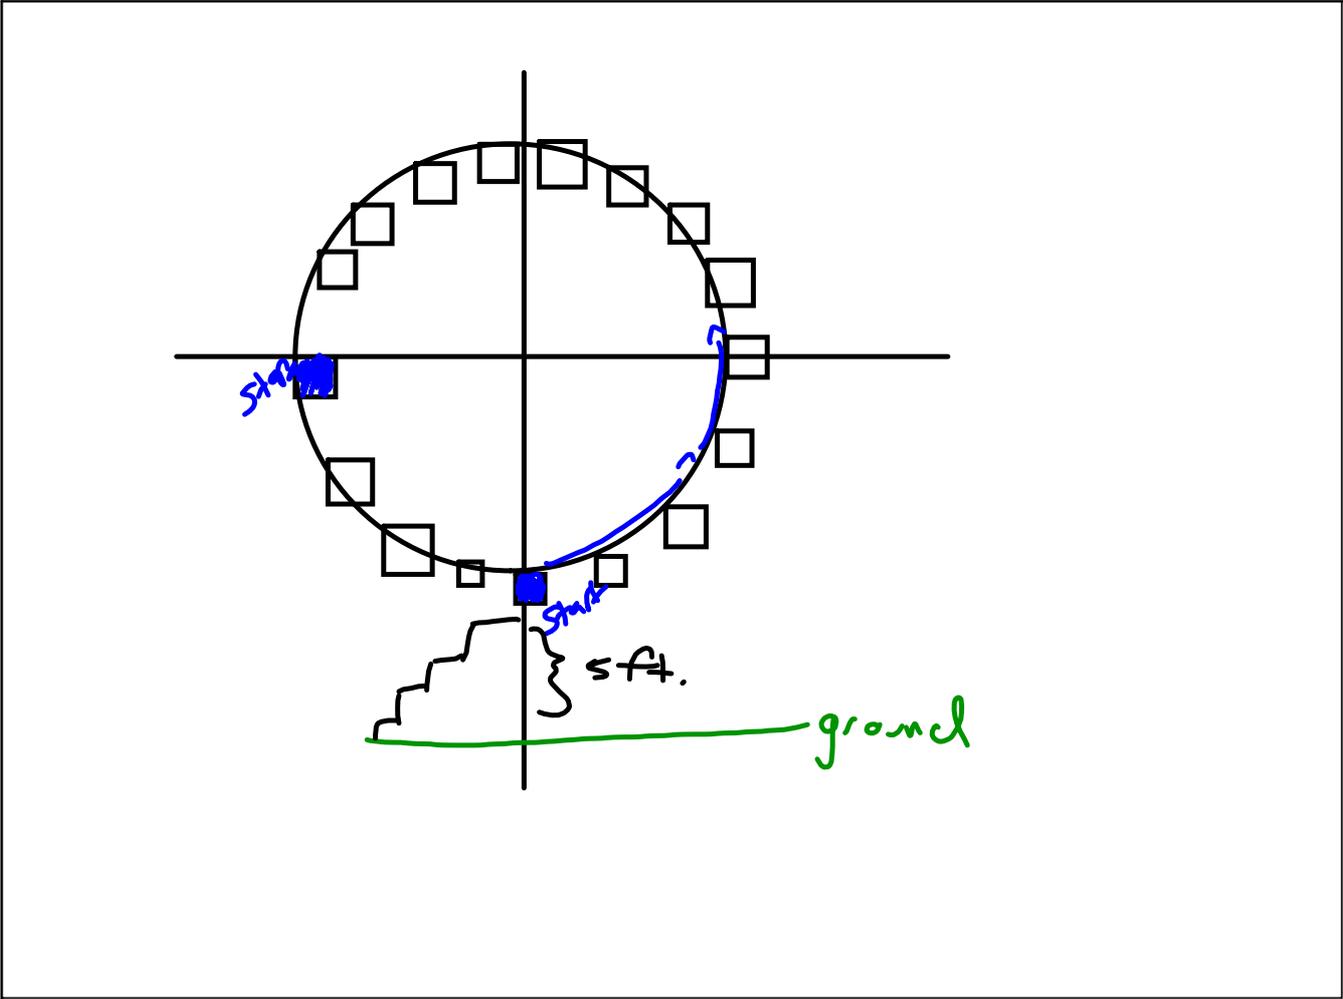

which trig function that would be graphed.

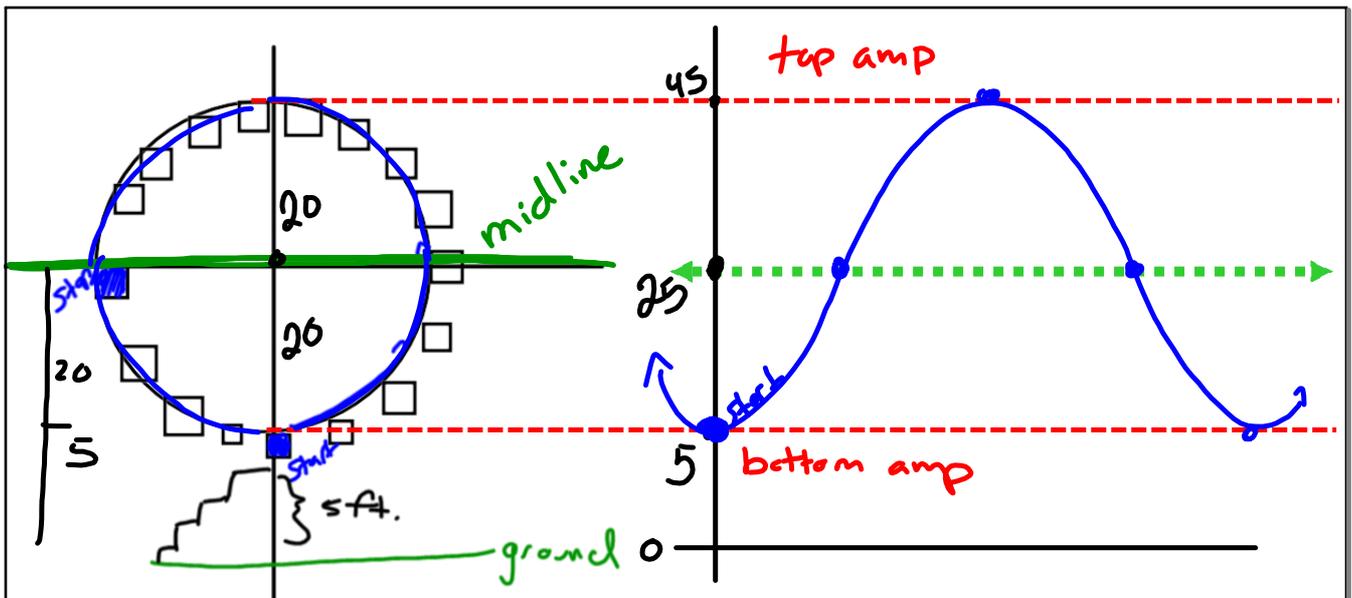

function  $\Rightarrow$  cos

$$y = -25 \cos ( ) + 35$$

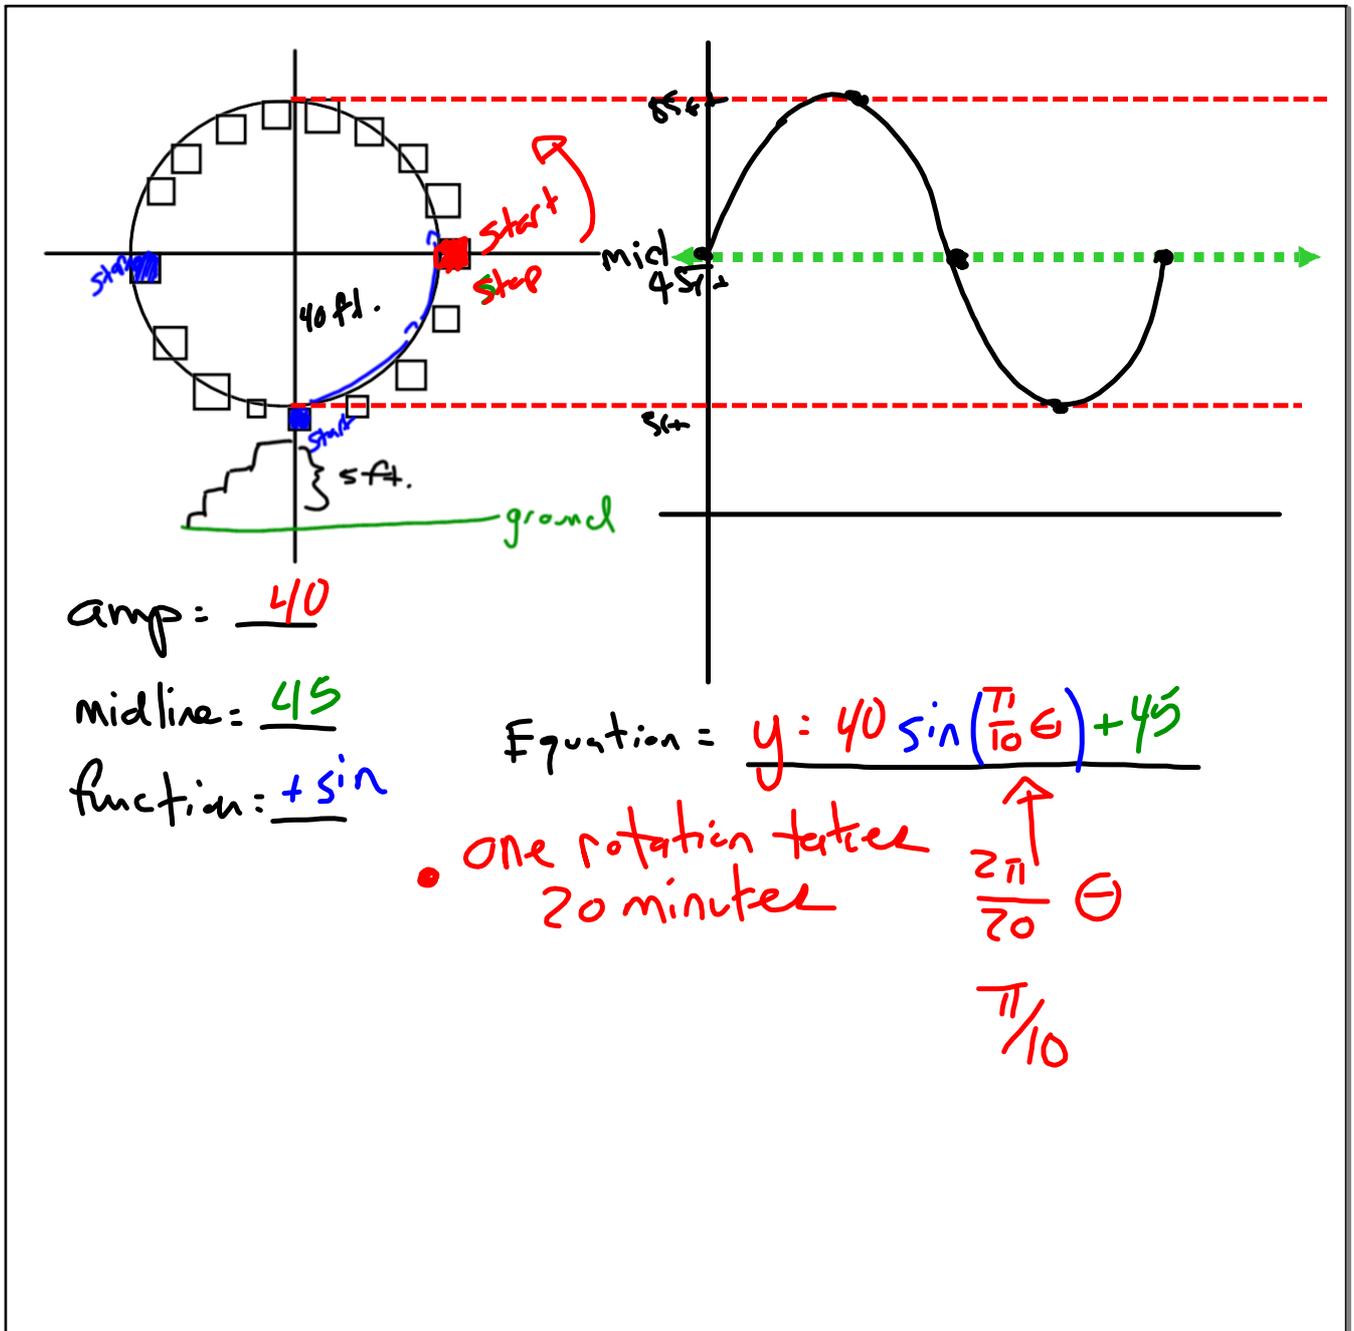

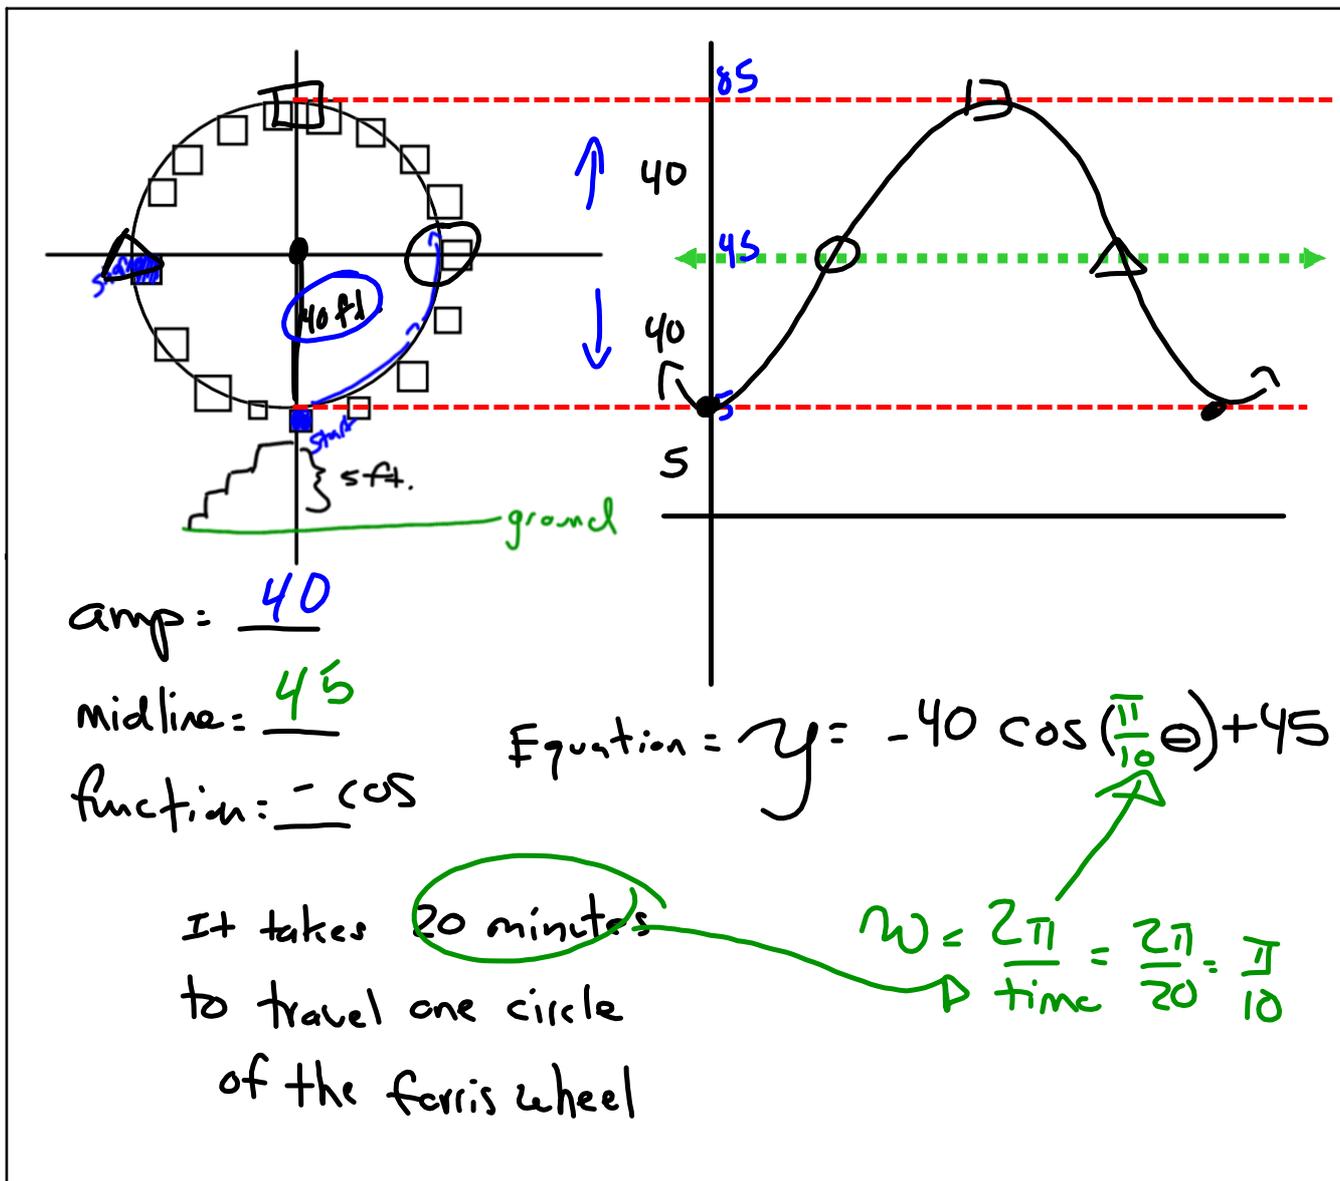

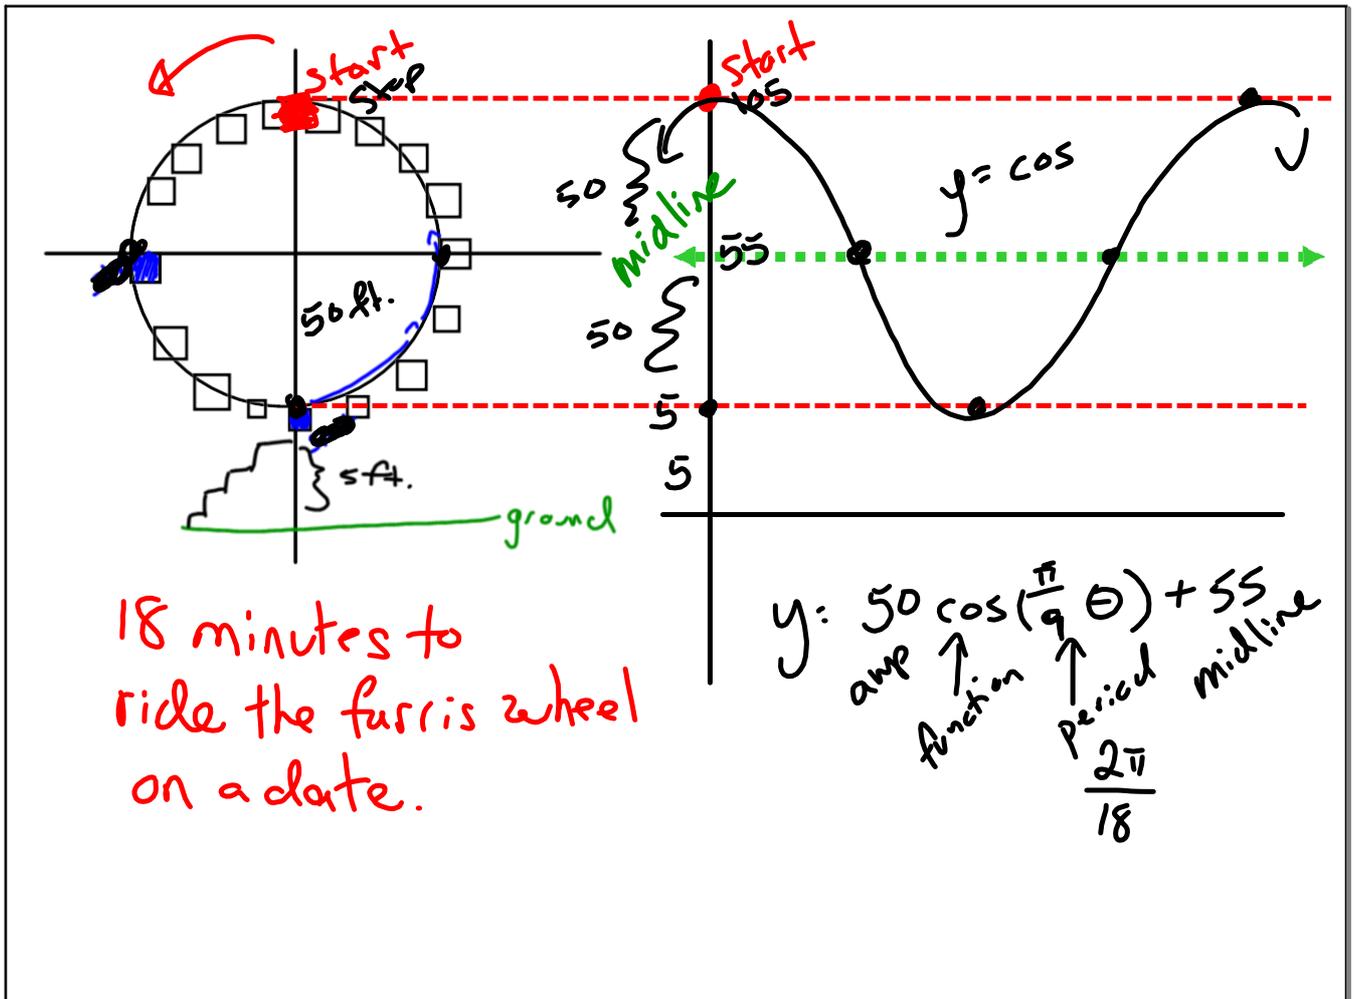

amp = 20  
 midline =  $y = 25$   
 function =  $-\cos$

$$y = -20\cos(\omega t) + 25$$

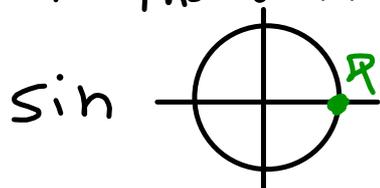

↑ period  
 the time it take  
 to rotate one full circle

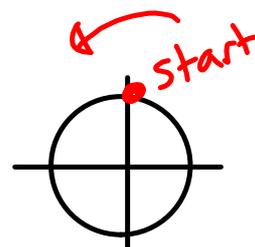

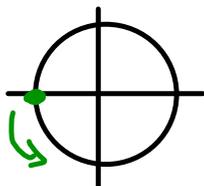

what is the difference between

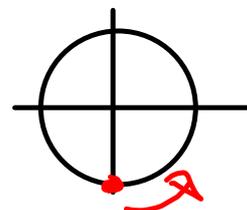

$\cos$

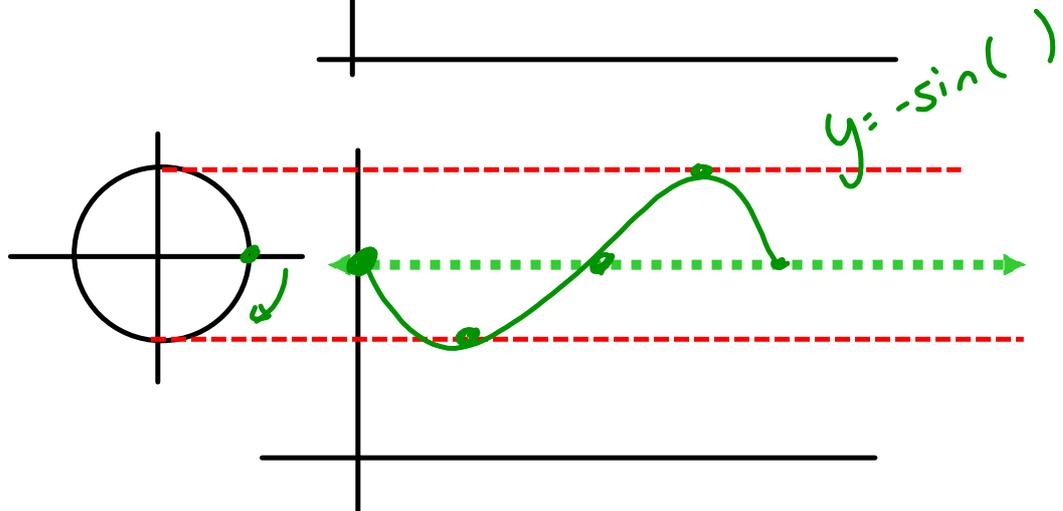

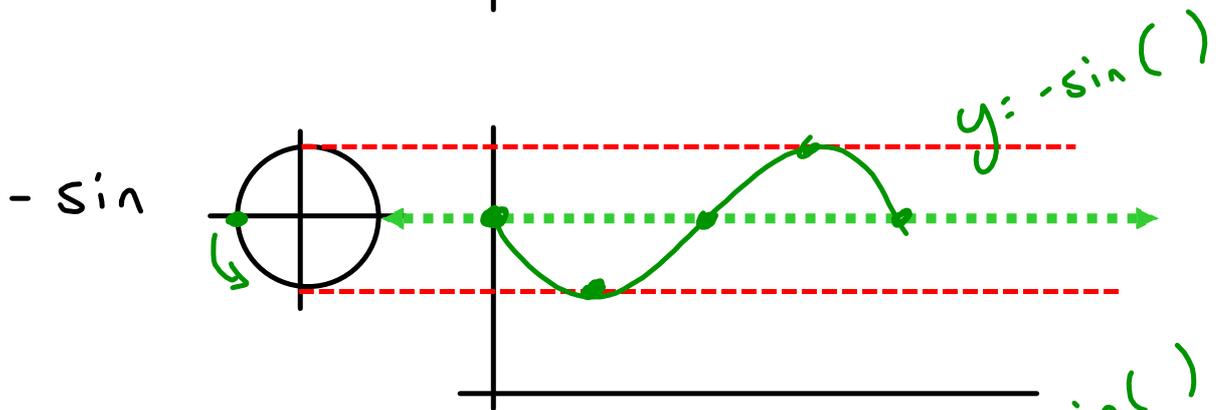

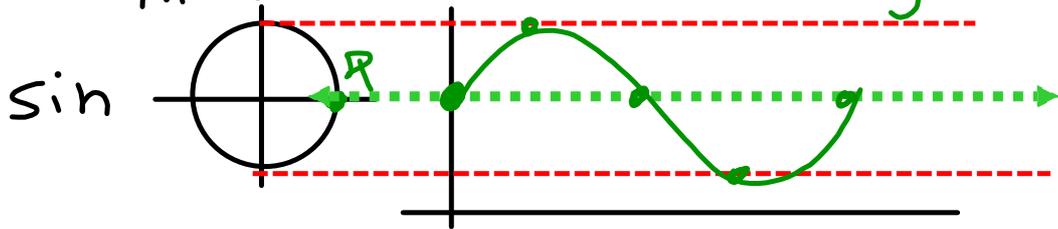

$-\sin$

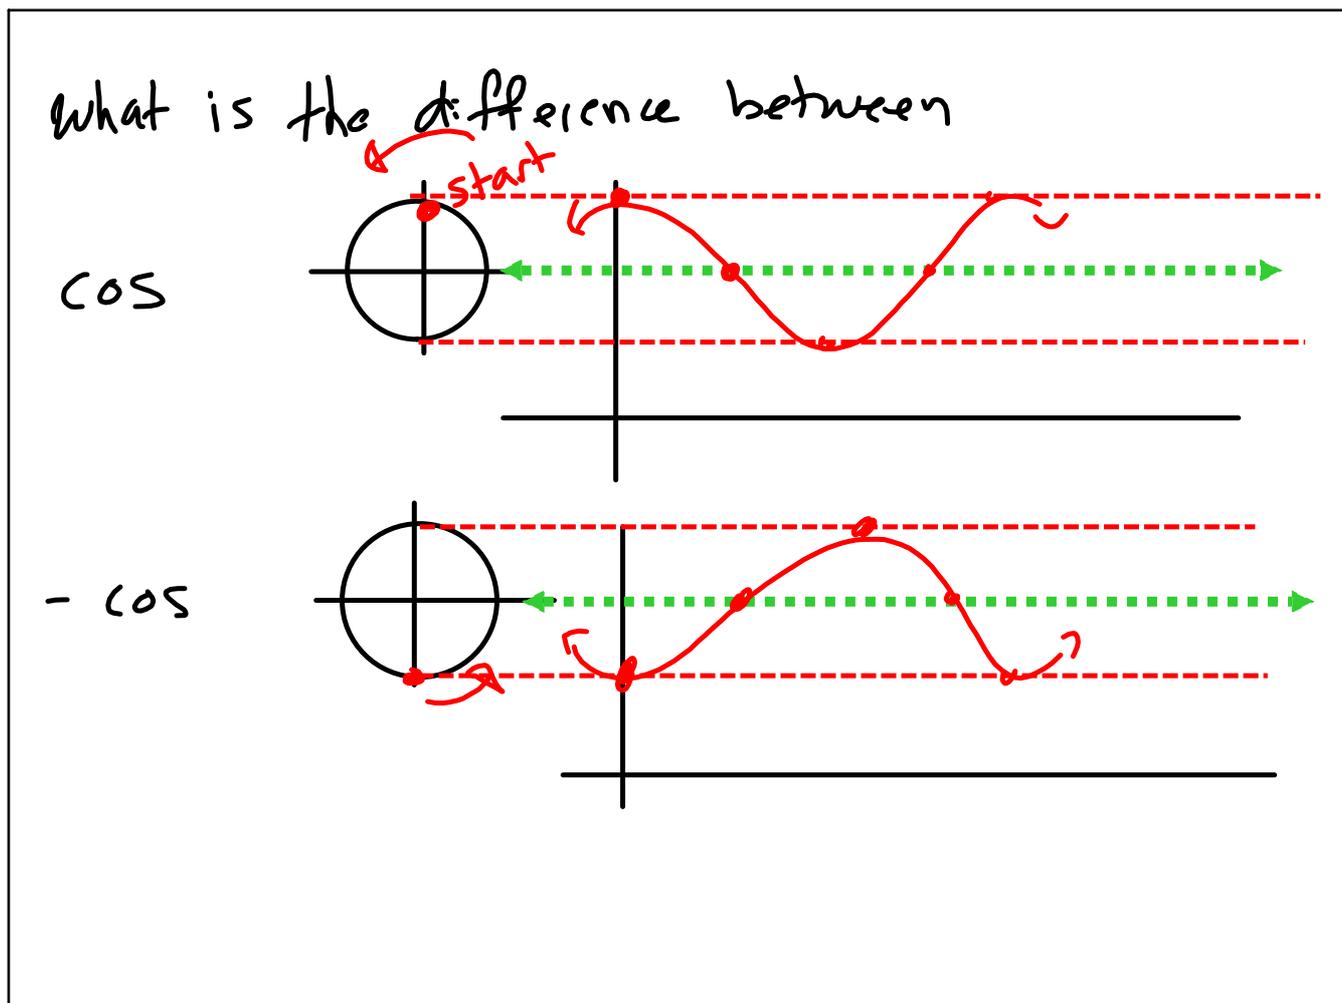

$-\cos$

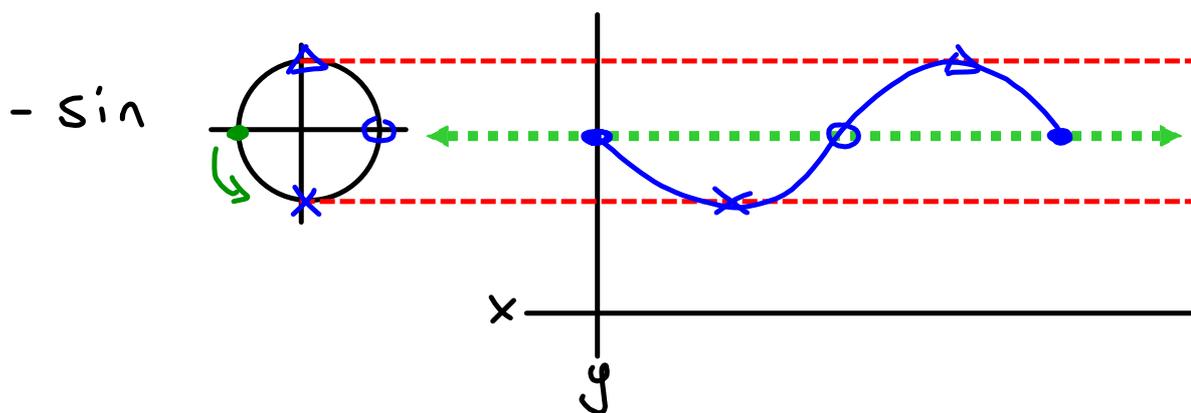

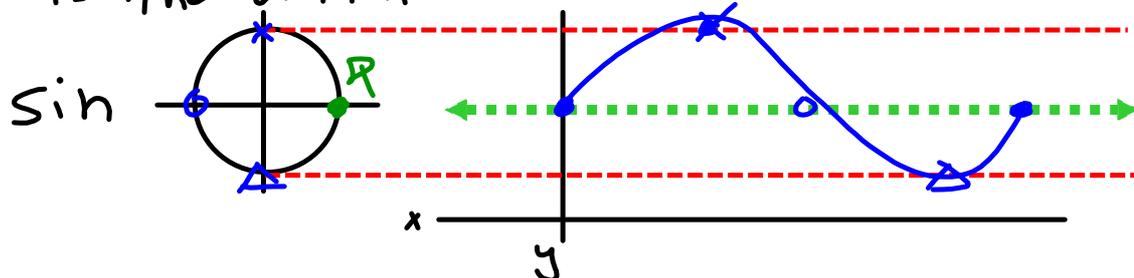

what is the difference between  $y = \sin( )$

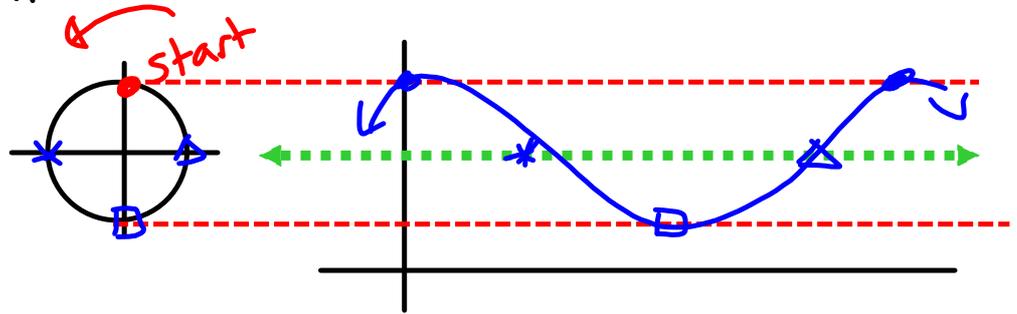

what is the difference between

what is the difference between

cos

- cos
