## Notes 4.1 Probability Distribution Part B

## II. Mean, Variance, and Standard Deviation

Formula for mean of a discrete random variable: In words, how do you find the mean?

Formula for variance of a discrete random variable: In words, how do you find the variance?

Formula for standard deviation of a discrete random variable:

## Example 4:

Find the mean, variance, and standard deviation from the new employee sales from Example 2.

| $\mu=$ | $x$ | $P(x)$ | $x P(x)$ | $x-\mu$ | $(x-\mu)^{2}$ | $P(x)(x-\mu)^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0 |  |  |  |  |  |
|  | 1 |  |  |  |  |  |
| $\sigma^{2}=$ | 2 |  |  |  |  |  |
|  | 3 |  |  |  |  |  |
|  | 4 |  |  |  |  |  |
| $\sigma=$ | 5 |  |  |  |  |  |
|  | 6 |  |  |  |  |  |
|  | 7 |  |  |  |  |  |

## III. Expected Value =

$\square$

## Example 5:

During a one-year selling period (225 days), a sales representative made between 0 and 9 sales per day, as shown in the table. If this pattern continues, what is the expected value for the number of sales per day for the sales representative?

| Number of sales, $\mathbf{x}$ | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Frequency, in days | 25 | 48 | 60 | 45 | 20 | 10 | 8 | 5 | 3 | 1 |

## Notes 4.1 Probability Distribution Part B

## Example 6:

At a raffle, 1500 tickets are sold at $\$ 2$ each for four prizes of $\$ 500, \$ 250, \$ 150$, and $\$ 75$. You buy one ticket. What is the expected value of your gain?

| Gain, x |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Probability, P(x) |  |  |  |  |  |
|  |  |  |  |  |  |

Assignment: New textbook: pgs 203 - 205/ 29, 34, 35, 39, 46 Old textbook: pgs 161-162/23
